📍 Kodagu, Karnataka 📞 +91 88671 46649 ✉️ priyashaship@gmail.com [🌐 linkedin.com/in/priyaks02](https://www.linkedin.com/in/priyaks02)

Career Objective

Motivated and detail-oriented Data Science student with strong skills in Data Analytics, Programming, and NLP. Passionate about learning, innovation, and applying analytical thinking to solve real-world problems through data-driven solutions and modern technologies.

Education

Bachelor of Engineering in Computer Science (Data Science)	2022 – 2026
<i>Alva's Institute of Engineering and Technology</i>	<i>Moodbidri, Karnataka</i>

Pre-University (PCMC)	2020 – 2022
<i>Aishwarya Independent PU College</i>	<i>Karnataka</i>

Schooling	Completed: 2020
<i>Shanthiniketan School</i>	<i>Karnataka</i>

Technical Skills

Programming: Python, C, SQL, HTML, CSS

Tools: Excel, Power BI, Tableau, VS Code, Google Colab, Git

Libraries: NumPy, Pandas, Scikit-learn, Matplotlib

Core Areas: Data Analytics, NLP, Data Cleaning, Data Visualization, Machine Learning

Experience

Data Science Intern	February 2026 – May 2026
<i>Bangalore, Karnataka</i>	<i>02 Feb 2026 – 16 May 2026</i>

- Worked on real-world data analysis and machine learning tasks using Python, Excel, and Power BI to generate business insights.
- Performed data cleaning, preprocessing, and exploratory data analysis on structured datasets for improved accuracy and reporting.
- Created interactive dashboards and visual reports using Power BI and Excel to monitor trends, KPIs, and performance metrics.
- Collaborated with mentors and team members on analytics-based projects involving NLP, visualization, and predictive analysis.
- Enhanced problem-solving and technical skills through hands-on implementation of data science concepts in practical business scenarios.

Projects

Smart Content Integrity System | *Python, TF-IDF, Cosine Similarity, Google Search API*

- Developed a plagiarism detection system for text, PDF, and code formats using NLP techniques.
- Implemented similarity detection algorithms across multiple document types for accurate content verification.
- Built an advanced full-stack integrity platform integrating AI content detection and structural code plagiarism analysis using GitHub API.
- Improved efficiency by 95% compared to manual verification by combining text, PDF, and code analysis into a single platform.

Business Sales Dashboard from E-Commerce Data | *Power BI, Excel*

- Created an interactive sales dashboard to analyze e-commerce data across multiple countries and time periods from 2009–2011.
- Visualized metrics such as total quantity sold (5M), sales revenue (2.5M), and pricing trends by invoice and product category.
- Performed data cleaning and transformation to generate meaningful business insights and improve reporting accuracy.

Facebook Ad Campaign Dashboard | *Power BI, Excel, Marketing Analytics*

- Designed an interactive dashboard analyzing ad campaign performance metrics including impressions, clicks, conversions, and spending.
- Visualized approved conversions by age group, ad spending, and campaign reach with over 94M impressions analyzed.
- Enabled better understanding of marketing effectiveness through data-driven visual analytics.

Conversation Flow Visualization for Chatbots | *Python, Matplotlib*

- Implemented conversation tracking using graph and tree-based data structures to map chatbot interactions.
- Used Matplotlib visualizations to analyze and improve chatbot conversation flows and debugging processes.

Digital Clock Integrated with Temperature and Humidity Sensor

- Built a real-time monitoring system for temperature and humidity using sensor integration and LCD/serial display output.
- Added a simple user interface for viewing environmental levels and setting threshold alerts.

Multi-Agent AI System | *Python, AI Agents, NLP*

- Developed a multi-agent AI system capable of handling task delegation, response generation, and workflow coordination between intelligent agents.
- Implemented NLP-based communication between agents to process user queries and automate decision-making tasks efficiently.
- Integrated Python-based logic for agent interaction, task prioritization, and contextual response management.
- Designed the system architecture to improve automation, scalability, and real-time problem-solving capabilities.

Achievements

- Solved over **300+ problems on CodeChef**, maintaining a consistent coding streak focused on logical reasoning and accuracy.
- Secured **Gold Medal in Abacus** at District and State Level competitions.
- Earned **225XP on Codecademy** by completing multiple coding exercises and programming challenges.
- Recognized in the **National Art Contest (2024)** for creativity and artistic excellence.

Certifications

- **The Complete Python Developer** – Udemy
- **Analysis and Design of Algorithms** – CodeChef
- **Data Visualization with Tableau** – Infosys Springboard
- **Fundamentals of AI & ML** – Infosys Springboard
- **Python for Data Science** – Infosys Springboard
- **Cloud Computing** – NPTEL
- **Data Structures and Application** – CodeChef

Soft Skills

Teamwork | Communication | Problem Solving | Leadership | Time Management | Flexibility

Extracurricular Activities

- Participated in beach cleaning sessions organized by college initiatives.
- Volunteered at cultural fests and orientation programs conducted within the institution.
- Coordinated team activities, managed materials, and ensured timely completion of assigned tasks.
